

Slide 1: Cover of presentation – Afternoon section

Slide 2: Table of contents (on afternoon)

- Quick fun game
- Apply AI in business
- Activity 2: Design an AI-Powered workflow
- Presentation
- Q&A section
- Closing Remarks

Time	Duration	Session title & Content	Slide and key point in slide
13h00 – 13h15	15 mins	Energy Booster & Corporate AI Showcase - Quick fun game to wake everyone up	Slide 3: Quick game to wake everyone up
13h15 – 14h00	45 mins	Scenarios apply AI into some specific domain: Customer support & Corporate Communication • Provide a specific use case for CRM process. • Describe the manual process, including the steps involved and the estimated time required. • What are the consequences of delays or inaccurate information retrieval? ➔ How will AI participate in that process to minimize manual effort? • Present a flowchart of how the multi-agent process will unfold. • Present details of important points, creating additional diagrams for the most visual explanation. • What are the short-term benefits and what are the long-term benefits? ==> Workflow – pain points Understand the current process How to understand the pain points (pain point identification). We need to give them the template to map the process (main things)	Slide 5: Apply AI in business Slide 6: Proposed a detail scenario in customer support, corporate communication Slide 7: How to approach the problem by using AI? (maybe 1 or 2 slides) Help me to design circle a step by step to analyze the problem pain point to have the result Present as step –by – step (about 4-5 steps) The final step is to design an automation workflow

		A short demo of an automation workflow on N8N (optional) The risk of using AI • Security • Compliance • Consistency • Cost • Hallucination Human-in-the-loop (minimize risk) • Humans must validate all AI inputs and outputs before they are used. • Humans must approve any AI-generated actions before execution. Problem with too many items related to sale teams and customers. - Sometimes the system is not accurate - How much human time and effort? Potential problems Summary: Some golden rules when using AI	Slide 8: Output automation workflow Draw automation workflow Slide 9: Risk of Using AI 5 risks and give example of each risk for company or department. Slide 10: How to minimize risks? - Human in the loop + example - Add 2 ways to minimize risk + example Slide 11: 5 golden rules: Propose 5 rules and explain + example
14h00 – 14h30	30 mins	Activity 2: Design an AI-Powered Workflow After understanding the fundamentals of AI and its business applications, your team will: • Identify one business process within your department that could benefit from AI. • Analyze the current workflow and identify pain points, bottlenecks, or repetitive tasks that consume significant time and effort. • Determine where AI can add value by improving efficiency, reducing manual work, or enhancing decision-making. • Design and present a future-state automation workflow that integrates AI,	Slide 12: Activity 2: Slide 13: Step by step to do activity 2. Summary and example output of each step for audience (please consistency to step in slide 7, to part must be same step)

		including any Human-in-the-Loop approval steps where appropriate.	
14h30 – 14h45	15 mins	Tea break	
14h45 – 15h15	45 mins	Activity 2: Team Presentations Each team will present: • Current business process • Key pain points and bottlenecks • Proposed AI-powered automation workflow • Expected business benefits and ROI Open Discussion Participants are encouraged to: • Ask questions • Share feedback and suggestions • Discuss similar use cases from their departments • Identify potential risks and Human-in-the-Loop requirements	Slide 14: Presentation - Outline what each group have to present - Another group can question and discuss
15h15 – 15h45	15 mins	Interactive Q&A session: - Share the pain point - Ask any things	Slide 15. Q&A session
15h45 – 16h00	15 mins	Closing remarks & Feedback Poll	Slide 16: Closing remarks Slide 17: Thank you
