

Slide 1: Cover of presentation

Slide 2: Table of contents (only morning)

- Welcome and Ice break
- AI introduction
- Prompt template
- Demo
- Activity 1: <please create the name of activity 1>
- Group presentation
- Conclusion and Summary

Time	Duration	Session title & Content	Slide and key point in slide
9:00 - 9:15	15 mins	Welcome and Ice break • Welcome remarks and setting expectations • Investigate the level of using AI – some warmup question	Slide 3: Slide for welcome and the reason for the training today.
9:15 – 9h:55	40 mins	AI introduction: What is AI? • Explain simply • AI = software that can: ○ Understand requirements ○ Learn patterns ○ Automate repetitive work ○ Help with decision making AI timeline • Traditional software • Machine learning • Deep learning • <u>Generative AI</u> • <u>AI agent</u> • <u>Agentic AI</u> Current AI Landscape • Knowledge & Productivity: ChatGPT, Claude, Gemini, Perplexity, NotebookLM, Microsoft Copilot. • Software Development: Cursor, Codex • Media & Content Creation: Gamma, Midjourney, DALL·E, ElevenLabs	Slide 4 AI introduction. Slide 5: What is AI? Slide 6: AI timeline Slide 7: Current AI landscape: - Divide in 3 cate and 3 for each cate - Just push the logo of AI tool in each cate

9h55 – 10h15	20 mins	Prompt template: - Present a standard prompt template: Role + Context + Task + Constraints + Output format - Why is that part necessary? What would happen if it were missing, and what would the consequences be? - Demo and visual evidence of the output results when using prompt templates and when not using them.	Slide 8: Prompt template Slide 9: Prompt template including Role + Context + Task + Constraints + Output format Slide 10: Evidence between simple way and using prompt template Slide 11: why is that part necessary? => some sample
10h15 – 10h30	15 mins	Demo: 10 mins for ChatGPT 5 mins for NotebookLM (maybe others)	Slide 12: demo
10h30 – 10h45	15 mins	Tea break	Slide 13: Tea break
10h45 - 11h15	30 mins	Activity 1: (A template will be prepared for each group to conduct the activity) Flow: Pain points → Can AI solve ? → Which AI ? → Prompt → Result The pain encountered in the work process, from management to employees. - Giving the question and asking them to classify which pain points can be tackled by AI. - Using a prompt template to write for each task above. - Each group will use a prompt in 2 different AI do compare the result - Each group must prepare a laptop to practice using AI (each group will do different tasks by using different AI applications). For example, a group uses ChatGPT to chat, a	Slide 14: Activity 1. Give 7 tasks Ask for choosing which AI or not? If yes which AI can use? Why Prompt? Result Slide 15: Give them 1 sample of activity 1

		group uses Gamma to create a presentation, etc.	
11h15 – 11h45	30 mins	Activity 1 Presentations (<i>Maximum 10 minutes per team</i>) - Create format for them to present (1.2.3) Each team will present the results of their discussion, including: • Identify the tasks that consume the most time or require significant repetitive manual effort. • Classify which tasks are suitable for AI assistance and which tasks should remain human-driven. • Demonstrate how improving the prompt can enhance AI-generated outputs by comparing the results before and after applying the prompt engineering techniques learned during the training. Group Discussion After each presentation, other teams are encouraged to: • Ask questions about the proposed use cases and AI-generated outputs. • Provide feedback and suggestions for improving the prompts. • Share alternative approaches or similar use cases from their own departments. • Discuss whether AI is the appropriate solution for each task and identify any potential limitations or risks.	Slide 15: Each group will present based on the requirements
11h45 – 12h00	15 mins	Conclusion and summary • Conclude about the knowledge • What have we done? • Main content in the afternoon	Conclusion
